Adirondack Research Library

The Adirondack Chronology is a useful resource for researchers and all others interested in the Adirondacks. It is made available by the Adirondack Research Library (ARL) of the Association for the Protection of the Adirondacks. It is hoped that it may serve as a 'starter set' of basic information leading to more in-depth research. Can the ARL further serve your research needs? To find out, visit our web page, or even better, visit the ARL at the Center for the Forest Preserve, 897 St. David's Lane, Niskayuna, N.Y., 12309. The ARL houses one of the finest collections available of books and periodicals, manuscripts, maps, photographs, and private papers dealing with the Adirondacks. Its volunteers will gladly assist you in finding answers to your questions and locating materials and contacts for your research projects.

Introduction

Is a chronology of the Adirondacks really possible? Is there any merit in attempting to record the beginning of every town; the opening date for every golf course, airport, factory, road and power line right-of-way; the closing of every dam; the passing of every important meteorological event, earthquake, landslide, forest fire and flood; the appearance of every alien species or biological pathogen; the extinction or extirpation of every native species; the promulgation of every law; the making of every work of art, which has occurred in the two great parks of New York or has impact on these great resources? Of course we argue “yes” - because someone will want to know and because the resulting juxtaposition of events will inevitably lead to new ways of thinking about our regional history and the causality of its events.

Besides, the era of the computer is upon us and the interested user can easily find a desired date or dates in seconds. And all are welcome to help us draft this nearly endless list; just contact one of the chronology managers with your suggestions. The task is not impossible.

The Adirondack Chronology deals with all aspects of the Adirondack region to best suggest the various causal processes at work; several examples: forest exploitation leading to forest fire, in turn leading to protective legislation; trails of the Haudenosaunee leading to roads fostering development and then protective legislation, and so on. Crucial events also often occur well outside of the Adirondack region, e.g. invention of the snowmobile, the building of coal burning plants in the Mid-West, the growth of nickel-copper smelting in the Sudbury region of Ontario, the explosion of Mt. Pinatubo in the Philippines, federal and state legislation, the introduction of the European Starling in New York City, the painting of a great picture or the writing of an inspirational poem. Further, one of our greatest challenges has been the point where we break the “causal chain”, but without doing so we are faced with recounting much of the history of civilization! We thus ask for the patience of the user on such decisions.

The user may use the Find mode to extract any particular subject such as the natural history of the moose or American beaver, the history of the Association for the Protection of the Adirondacks, the dates of establishment of the many Correctional Facilities in the region, or many other subjects. In respect to the Haudenosaunee, i.e. the People of the Longhouse, we usually use this name rather than the more pejorative term Iroquois. The works of Stephen T. Jackson (1988, 1990) and Donald Whitehead (1990) have been especially useful in estimating the advent of the sylva. We use their first approximations. The Environment DEC Newsletter with its Issues of Environment is another especially useful resource.
Representative works, i.e. not all of the works, of a particular author, poet or artist, are often given to suggest
the period of his or her activity. References for many topics are presented, especially those dealing with more
esoteric topics. Well-known events are cited documented in many available sources – including electronic
“search engines” - and these are usually not listed. Acronyms are commonly used toward conciseness and a
special section explaining each follows. Details on dam locations are limited in accord with security measures
introduced following the events of September 11, 2001, however the serial number for each dam is listed to
permit further research with the NYS DEC. A number of authorities have been especially helpful with their
guidance and they are listed with our profound thanks. Finally, we offer the inevitable disclaimer: The dates
provided are the best that we have discovered. Some may be wrong. Do not place total faith in our offerings.
Further, we would appreciate receiving guidance on dates and events which should be included or those which
you find to be in error.

Chronology - Part 1 – Event and Year

The Universe begins its expansion as the Big Bang
Quarks and gluons form a low-viscosity liquid
Particles form
Atomic nuclei form
Helium is formed (in minutes and seconds Post Big bang)
Era of Atoms
Era of Galaxies
The sun forms
The earth and moon form
An atmosphere of carbon dioxide and nitrogen gases forms on planet Earth
A zircon granule is formed at a site now found Jack Hills (Outback), Australia
The lithosphere (continental crust) of the earth forms
Living organisms appear on earth; date based on altered carbon isotope ratios of organic mater
Archaeon Era begins
Aquatic sedimentation begins
Cyanobacteria (single-celled organisms) arise - as shown by fossil remains
Zircon is formed in the Superior Province NW of the Grenville Province (Protoadirondacks)
Photosynthetic algae in the oceans begin taking in carbon dioxide and releasing oxygen
Stromatolites appear on earth suggesting an atmosphere with increasing amounts of oxygen
Core of the North American continent forms as Archaean Era ends with stromatolites common
North American Craton rifts and Huronian sediments are deposited
Atmospheric oxygen increases rapidly – but this event is contested by some
Multicellular organisms appear
Sexual organisms appear
An object the size of Mt. Everest hits the earth near the current site of Sudbury, Ontario
The Hudsonian orogeny of the Canadian shield occurs
Anorthosite intrudes from below into most of the shields
Mt. Marcy massif of anorthosite forms (based on K/Rb dating by R. C. Reynolds)
Widespread formation of Adirondack anorthosite occurs
Stromatolites form in the NW Adirondack region
Tonalite (a kind of rock) forms in the SE Protoadirondacks
Zircon grains etc. begin their deposition in a shallow, warm, inland sea covering the Protoadks
Stromatolites colonize the shallow waters of an inland sea covering the Protoadirdackns
The Grenville Orogeny of the Canadian shield begins – the Elzevirian Phase
Intrusion of anorthositic and granitic basement rock of the Adirondacks occurs
Massive Grenville orogeny (Ottawan Phase) continues with deformation-metamorphism
Erosion for next 0.4 billion yrs. removes 25 kms of rock establishing the Grenville Plain
Seventy percent of the dominant Precambrian biota perishes in a great extinction
Iapetus opens in Adks with much NNE rifting and jointing and formation of diabase dikes
Vendian (Ediacaran) time begins with rapid end of global Marinoan glaciation
Multicellular animal fossils form
Igneous matter is injected into the faults of the Adirondacks forming diabase dikes
The Paleozoic Era opens and modern phyla emerge
The first of four mass extinctions occur during the Cambrian Period, the last in B.P. 0.51 bill. y.

Trilobites appear in the shallow, sedimentary seas submerging the Adirondack region B.P. 0.52 bill

Grabens grow in depth forming the basins of future Lake George and Schroon Lake B.P. 0.48 bill

Tectonic activity ceases in a flat Adirondack region for 450 million years B.P. 0.47 bill

The shallow, tropical Iapetus Ocean covers eastern proto-North America B.P. 0.45 bill

The majority of life is destroyed in a global cataclysm B.P. 0.44 bill

Green Mountains and Catskills form when North America and Europe collide B.P. 0.38 bill

A mass extinction occurs in the Devonian Period to establish the Frasnian-Famennian boundary B.P. 0.36 bill

The Allegheny Mountains form B.P. 0.28 bill

Asteroid/comet strikes NW Australian coast to destroy majority of species and end Permian Era B.P. 0.253 bill

The Mesozoic era opens B.P. 0.25 bill

The Triassic basins form and rifting gives rise to the Atlantic Ocean B.P. 0.23 bill

The Adirondacks rise and their sedimentary veil is lost through various forms of erosion B.P. 0.18 bill

Vulcanism with massive lava flows causes global T rise and widespread marine anoxia B.P. 94 mill

Adirondack Mountains continue to rise, possibly due to a deep “hot spot” causing the expansion B.P. 70 mill

Major asteroid strikes Yucatan area of Central America ending Cretaceous era, age of dinosaurs B.P. 66 mill

The Cenozoic era opens B.P. 66 mill

Vulcanism induces Paleocene-Eocene thermal maximum with global T 5-10 C above present B.P. 55 mill

Songbirds, Passerida (3,500 species), native to Australasia, begin worldwide spread B.P. 45 mill

The Mammutidae (Mastodons) emerge in North Africa B.P. 35 mill

Mammutidae (Mastodons) spread from Africa into Eurasia B.P. 20 mill

Mammutidae (Mastodons) cross the Bering Isthmus from Eurasia to North America B.P. 15 mill

Laurentide glaciation begins shaping mountains and valleys of Adirondack region B.P. 5 mill

The American Mastodon (Mammut americanum) ranges from coast to coast in North America B.P. 5 mill

The modern cycle of glaciation begins B.P. 1.6 mill

Home erectus use hearths at Escale, near Marseilles, France, and use of wood fuel increases B.P. 450,000

Neanderthals (Homo neanderthalensis) are extant in Europe, western and central Asia B.P. 200,000

Glacial maximum predicted by Milutin Milankovitch on an astronomical basis B.P. 185,000

Riss Glaciation closes – with average temperatures 10 degrees F. colder than today B.P. 150,000

Glacial maximum predicted by Milutin Milankovitch on an astronomical basis B.P. 111,000

Glacial maximum predicted by Milutin Milankovitch on an astronomical basis B.P. 70,000

Deep-sea sediment analysis indicates atmospheric temperatures fall 15 °F in Europe B.P. 40,000 to 35,000

Neanderthals (Homo neanderthalensis) disappear from Europe B.P. 32,000 to 24,000

Homo sapiens gathers and processes wild grains along the Sea of Galilee, eastern Mediterranean B.P. 23,000

Laurentide ice sheet reaches its maximum extent B.P. 21,700

Retreat and melting of glaciers creates glacial Lake Vermont B.P. 14,500

Glacial ice sheet is in active recession from southern NY B.P. 14,000

Oceanic salt water enters Lake Vermont changing it into the Champlain Sea B.P. 13,000

Aboriginal man of North America extinguishes 30 species of the megafauna B.P. 13,000

Glacial ice sheet is in active recession from Adirondacks and Catskills B.P. 12,700

Glacial Lake Iroquois begins drainage of melt waters through the Mohawk Valley B.P. 12,600

Organic matter begins deposition in the Luzerne bogs, Saratoga Co. (14C) B.P. 12,600

Organic matter begins deposition in the Upper Wallface bogs, Essex Co. (14C) B.P. 12,390

Lake Frontenac succeeds Lake Iroquois draining through the St. Lawrence Valley B.P. 12,200

Pollen/macrofossils indicate arrival of Dwarf Birch, Betula glandulosa, in AHP B.P. 12,000
Trees return to NY providing a firm basis for radiocarbon dating B.P. 11,600
Pollen/macrofossils indicate arrival of the White Spruce, *Picea glauca*, in AHP B.P. 11,400
Crustal changes isolate Lake Champlain from the sea B.P. 11,000

The word foresta appears in the lexicon being applied to royal game preserves 700s A.D.

The word foresta appears for the first time in the laws of the Longobards and the capitularies of Charlemagne. Referring not to woodlands in general but only to the royal game preserves. The word has an uncertain provenance. The most likely origin is the Latin foris, meaning “outside”. The obscure Latin word forestare meant “to keep out, to place off limits, to exclude.” In effect, during the Merovingian period in which the word foresta entered the lexicon, kings had taken it upon themselves to place public bans on vast tracts of woodland in order to insure the survival of their wildlife, which in turn would insure the survival of a fundamental royal ritual – the hunt.

All summer long the wind blue steady from the north in blasts of snow and ice. Mothers knitted wooly
warm mittens and socks of double thickness for their children. Farmers who worked out their taxes on the
county roads wore greatcoats, and hearth fires were indispensable. July came in with winter ferocity. On
Independence Day ice as thick as window glass formed throughout New England, New York, and parts of
Pennsylvania. Crops which in some areas had struggled through May and June gave up the ghost. And to the
surprise of all, August proved the cruelest month. icy fingers of blight and bane spread as far as England.
Newspapers from overseas reported a snowfall at Barnet, 30 miles from London on August 30th.

This enormous consumption of timber (white pine, spruce, hemlock) has nearly exhausted the primitive forest, and the business may be regarded as approaching its termination.

No climate is more salubrious, or better calculated to secure enjoyment and comfort to man. the atmosphere clear, elastic and invigorating, bears no miasmatic exhalations. The winters of this climate are often
severe but equable. The summers are warm, and yield a rapid impulse to vegetation, that promotes an early maturity. The heat of summer is modified by the cool and exhilarating breezes of the lakes and mountains.

. . . The fact that this work is prosecuted under the direct supervision of Thomas C. Durant, Esq., one of the principal stockholders of the Company, and one of the ablest railway men of the country, is a sufficient guarantee for its rapid progress; and with its completion, the Adirondack region will become a suburb of New York. The furnaces of our capitalists will line its valleys and create new fortunes to swell the aggregate of our wealth, while the hunting lodges of our citizens will adorn its more remote mountain sides and the wooded islands of its delightful lakes. It will become, to our whole community, on an ample scale, what Central Park is on a limited one. . .

Here we were startled by the sight of the fresh tracks of a panther or cougar, which evidently made his home in this abode of plenty (a WTD yard); and shortly thereafter we found the body of a WTD freshly killed, and shockingly torn and mutilated. The guides were now all excitement, and followed the cougar’s trail eagerly. In less than thirty minutes a shout announced that he had been encountered and rushing forward to the southern front of the plateau I came upon the monstrous creature, coolly defiant, standing at the brow of a precipice on some dead timber, little more than twenty feet from where I stood. Quickly loading the rifle, I sent a bullet through his brain, and as the smoke lifted, saw him struggling in the fearful convulsions of death, till finally precipitated over the cliffs he disappeared from sight in the depths below. . . . The descent from this gorge, which we named the panther pass - having drawn the dead cougar through it with us, led down an easy incline covered with hard wood timber, . . .

President Theodore Roosevelt hosts a “Conference of Governors” (13-15 May) 1908

The results of this conference were immediate and far reaching. The state governors drew up a unanimous declaration in support of conservation. Thirty-six state conservation commissions at once sprang into being. scientific bodies appointed numerous conservation committees, and a National Conservation Commission was organized. In short, the sum of these several events gave the conservation movement a
prestige and momentum previously unknown and raised it to a plane that enabled it to survive the various
reversals it later suffered as a consequence of periodic shifts in political climate.

NCC completes national resource inventory report requested in the prior year 1909

This is one of the most fundamentally important documents ever laid before the American people. It
contains the first inventory of its natural resources ever made by any nation . . . The function of our government
is to insure to all of its citizens, now and hereafter, the rights of life, liberty, and the pursuit of happiness. If we
of this generation destroy the resources from which our children would otherwise derive their livelihood, we reduce the capacity of our land to support a population, and so either degrade the standard of living or deprive the coming generations of their right to life in this continent.

President Theodore Roosevelt

Conservation means the greatest good to the greatest number for the longest time . . . It demands the complete and orderly development of all our resources for the benefit of all the people, instead of the partial exploitation of them for the benefit of a few. It recognizes full the right of the present generation to use what it needs and all it needs of the natural resources now available, but it recognizes equally our obligation so to use what we need that our descendents shall not be deprived of what they need.

BLMI hires L. U. Gardner of Saranac Lab. to run animal studies on health impacts of asbestos 1936

During these studies (which ran for several years), Gardner discovered three salient facts about asbestos: 1. Asbestos caused cancer in the animals without first producing fibrosis, 2. The guideline that had been tentatively implemented to protect workers from asbestosis was too high, 3. The guideline had been designed to measure the wrong thing (total dust and not fibers). (Gardner had determined that it was the fibers, not the chemical composition that caused disease.)

Paul Schaefer et al. make first version of “great topographical map of Adirondacks” 1954

The great topographical map of the Adirondacks, exhibited at the Center for the Forest Preserve at 897 St. David’s Lane in Niskayuna, NY, is twelve feet high by ten feet wide and based on 62 USGS sheets of the Adirondack region. Some fifty individuals labored 13,000 hours in its production. Colonel William Hannah provided guidance on the techniques of production. Elliot Howe provided the overall coloring; David Utterback delineated the rivers, water bodies and developed areas. Alverra Johnson coordinated the project. This fabulous undertaking was stimulated in a conversation between Paul Schaefer and George Marshall. Harold Hochschild, founder of the Adirondack Museum, contracted a Philadelphia firm to make a fiberglass replica for display at The Adirondack Museum in Blue Mountain Lake. The original mold was later lost in a fire at Paul’s home.

The emergence in widespread practice of the Baconian creed that scientific knowledge means technological power over nature can scarcely be dated before about 1850, save in the chemical industries where it is anticipated in the 18th century. Its acceptance as a normal pattern of action may mark the greatest event in human history since the invention of agriculture, and perhaps in nonhuman terrestrial history as well.

The agency prepares long-range land use plans for both public and private lands in the park. The eleven-member body is an independent, non-partisan agency within the state’s executive department. Membership consists of eight private citizens appointed by the Governor for limited terms. Five of the citizens must be residents of the park. Three citizens must reside in parts of the state outside of the park. Members continue serving beyond expiration of their terms until a successor is named. Three state officials complete the agency structure: the Commissioner of Environmental Conservation, the Commissioner of Commerce and the Secretary of State.

*The Adirondack State Land Master Plan defines “wilderness”* 1972
A wilderness area, in contrast with those areas where man and his own works dominate the landscape, is an area where the earth and its community of life are untrammeled by man – where man himself is a visitor who does not remain. A wilderness area is further defined to mean an area of state land or water having a primeval character, without significant improvement to or permanent human habitation, which is protected and managed so as to preserve, enhance and restore, where necessary, its natural conditions, and which (1) generally appears to have been affected primarily by the forces of nature, with the imprint of man’s work substantially unnoticeable; (2) has outstanding opportunities for solitude or a primitive and unconfined type of recreation; (3) has at least ten-thousand acres of contiguous land and water or is of sufficient size and character as to make practicable its preservation and use in an unimpaired condition; and (4) may also contain ecological, geological or other features of scientific, educational, scenic or historical value.

A Definition of the Wilderness Class
Adirondack Park State Land Master Plan, 1972, page 15

Adirondack State Land Master Plan presents a number of “controversial elements” 1972

The most controversial aspects of the Plan was a directive that certain nonconforming uses in wilderness and primitive areas “be phased out as rapidly as possible and in all cases by December 31, 1975, on a scheduled basis”. In the wilderness areas, the nonconforming uses included jeep tails; snowmobile trails; manned and unmanned fire towers; observer cabins, telephone lines and state truck rails; horse barns; tent platforms; lean-tos above 3,500 feet, and lean-to clusters; helicopter platforms; and ranger cabins.

It’s important because there is so precious little of this wilderness in the world. I believe we need a place to get a sense of balance. There’s no better place to get that sense than where man has not ripped everything up. We have all these big problems, and you can go into the woods, and see how the natural order of things has handled them for thousands of years. I’m working for the protection of what little of that we have left.

When I arrived at Lake George I painted a horse's skull -- then another horse's skull and then another horse's skull. After that came a cow's skull on blue. In my Amarillo days cows had been so much a part of the country I couldn't think without them. As I was working I thought of the city men I had been seeing in the East. They talked so often of writing the Great American Novel -- the Great American Play -- the Great American Poetry. I am not sure that they aspired to the Great American Painting. Cézanne was so much in the air that I think the Great American Painting didn't even seem a possible dream.

I hope that people concerned with the future of the Adirondack Park can accept it as a cultural landscape: a place of people, their artifacts, and nature. The Adirondack Park has both a natural and a human history. If we can look for new strategies for telling the region's stories, moving from narratives that polarize and exclude to one of harmonious relations between people and nature, then the Adirondacks can indeed provide the first chapter in a new story for the whole world.

NYS adopts a revised rare plant list 2000

Various government laws, regulations and policies protect rare plants. Probably the most surprising aspect of rare plant protection is that, unlike animals, plants are the property of the landowner whether they might be individual, corporation, or government agency. This means that the protection of rare plants is under the control of the landowner unless, in some cases, a government-regulated action is affecting them. Then the government entity regulating the action may require that the protection efforts take place to preserve the rare plants and their habitat.

All state (New York) residents live in either a city or a town, as their boundaries do not overlap. Villages, in contrast, are located within towns, and their residents pay taxes to both the village and the town. Historically, a village tended to be the more densely populated section of a town—the part for which additional services such as water, sewer, police and fire protection were likely to be needed. In essence, a village was a smaller version of a city, providing services not available in the surrounding areas of the town. However, rapid suburbanization after World War II led to changes in law that allowed such services to be provided without creation of a village (often these services are provided through “special districts”). Today, water, sewer, sanitation, police and fire protection services are provided routinely throughout towns, and the incorporation of a village is no longer necessary for these purposes.

Big news: Some 257,000 acres of International Paper Co. land in the Adirondacks have been dedicated to various recreational and preservational uses: 82,000 a. with full public access rights, 173,000 a. with partial rights for hiking and snowmobiling, and 2,000 a. through outright purchase. Lands of nine counties are
involved: Hamilton, Warren, Washington, Franklin, Clinton, St. Lawremnce, Essex, Saratoga and Herkimer. The cost is about $34M: $23.9M from the state, $5.5M from the Environmental Protection Fund, and $4.4M from the Richard King Mellon Foundation and the Ace Group. Planning by the Pataki administration for the deal began in 2004. The Lyme Timber Co. of Connecticut will own most of the land and apply sustainable forestry methods benefitting land, commerce and community in concert with various easements.
